Skills: Java | Junit | MySql | Spring Boot | AWS | Client Engagement | Git | Cloud Governance

SUMMARY:

In total 3 years of experience in the industry worked on AWS, GCP and Java as developer as tester roles.

PROFESSIONAL EXPERIENCE:

Cloud Project:

Title: Cloud Governance for GCP Project

Duration: 8 months

- Pioneered the identification and effective mitigation of potential risks during the organization's transition to the cloud.
- Assumed the responsibility of collecting substantial evidence and drafting meticulous reports in compliance with organizational guidelines and security standards.
- Worked in tandem with the development team to delineate control strategies.

Banking Project:

Title: Application Development for Bank

Duration: 7 months

- Spearheaded the development of critical microservices and APIs in Spring Boot, optimizing data retrieval from databases. Used MySQL for database transactions.
- Utilized Java 8 and Spring Boot for project. Used GitHub for code push and pull. Followed Agile and Scrum methodologies. Reduced vulnerabilities in lines of code by evaluations.
- Methodically crafted and executed test cases to ensure code reliability and functionality.

Testing Project:

Title: Project for Pharmaceutical Firm

Duration: 8 months

- Orchestrated the creation of meticulous Junit test cases, maintaining an impressive 75% test coverage. Collaborating with developers to ensure seamless alignment and debugging codes.
- Played a key role in crafting a comprehensive test design document and liaising with clients to present functionalities and collect valuable feedback. Resolved errors by testing and reporting.
